

Our Solution: AI Security Orchestration

The Challenge

Artificial Intelligence should be transforming cybersecurity and privacy operations through automation and scale. Instead, most organizations are paying more for fragmented tools and larger teams—while security outcomes stagnate or decline. The Cyber challenge is AI vs. AI not Human Vs. AI – you need a platform that support the reality not the past.

AI SOAR

The ZeroTrusted.ai AI SOAR Platform is built to replace fragmented security stacks with a unified, AI-native command center for security, privacy, reliability, and compliance—across both traditional IT and modern AI systems. With over 200 Trained, Tested, and Certified AI Agents, 300 AI tools with CLI backends for efficient AI Agent use, and 250 connections to conduct full cyber missions at the speed of AI.

Single Command Center for AI & Cybersecurity

Centralize command, control, visibility, and response across AI systems, AI Agents, cloud, networks, identities, and supply chains from one SOAR dashboard.

AI-Native Risk, Threat & Intelligence Fusion

Continuously correlate AI risk, threat intelligence, watchlists, logs, and behavioral signals—detecting issues humans and legacy tools miss.

End-to-End Zero Trust Enforcement

Built-in Zero Trust IAM, asset inventories, system boundaries, identity controls, and supply-chain risk scoring—aligned to modern ZTA mandates.

Automated Assessments, POA&Ms & Evidence

Run continuous security, privacy, and AI assessments with automatic POA&M tracking, control coverage, evidence collection, and chain of custody.

Integrated Scanning & Technical Validation

Native SAST, DAST, network scanning, packet capture, STIG checking, patch management, and SCAP content—no bolt-on tools required.

AI-Focused Incident Response & Assurance

Go beyond cyber IR with AI-specific response, forensic evidence, model assurance, observability, and reliability testing.

Compliance Built In, Not Bolted On

Pre-mapped controls and automation for FISMA, HIPAA, NERC CIP, AML/KYC, and regulated sectors—reducing audit time by orders of magnitude.

Policy, Documentation & Reporting Automation

Instantly generate policies, reports, SSP artifacts, AI policies, and compliance documents—directly from live system data.

Designed to Scale with AI Operations

Supports LLMs, agents, RAG, vector databases, inference engines, and traditional systems—future-proofing your security program.
